ZARMEEN GARDENS REAL ESTATE ERP · SETUP GUIDE

Setup — project, map, plots and rules

Everything the scheme needs before the first booking: the settings and rules, the project and its boundary, blocks, plot sizes, plots, payment plans, society charge heads and the users with their roles.

1 · Settings
Company, rules, fees, WhatsApp, land

2 · Project & map
Boundary, land use, import

3 · Blocks & plots
Sizes, prices, plots

4 · Plans
Down payment, installments

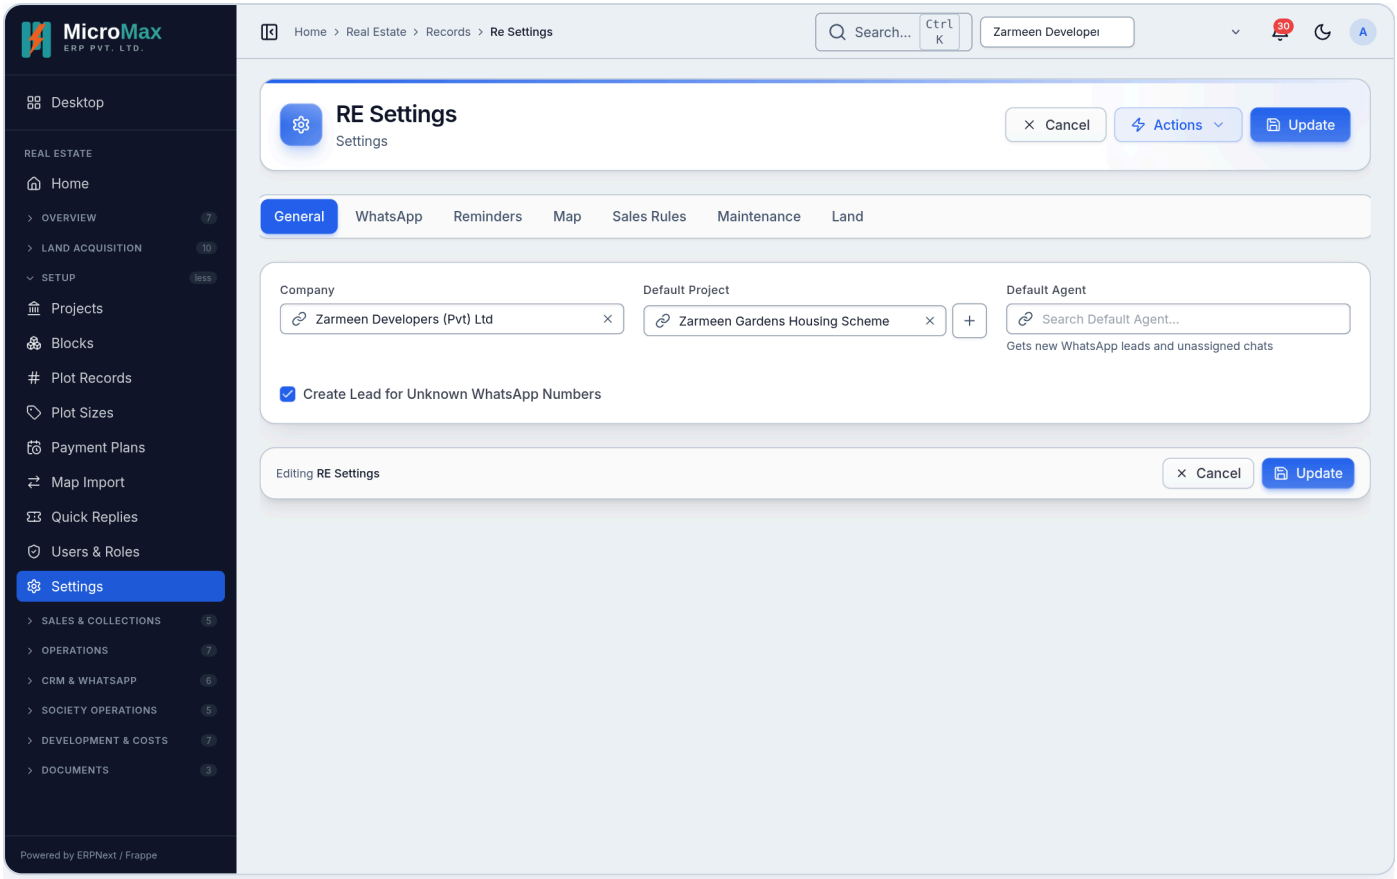

5 · Users
Roles and profiles

Who: Admin (System Manager), Sales Manager, Society Manager.

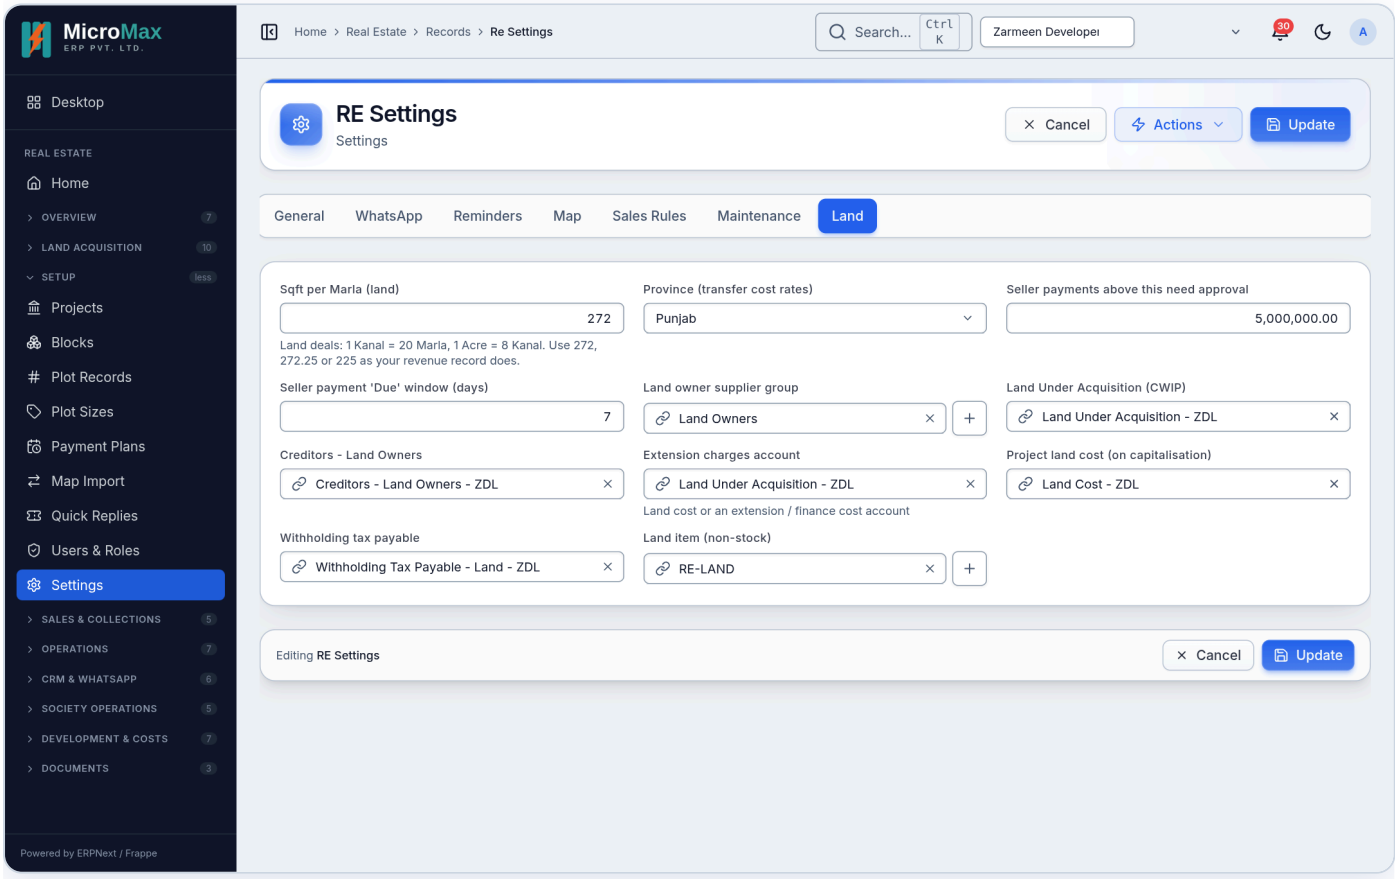

1 Settings and rules

1. Open **Setup** → **Settings** (RE Settings). Set the company, the default project and the discount limit.
2. Rules are settings, not code: surcharge (grace days, % per month, minimum, cap), transfer and re-allotment fees, cancellation deduction and the agent / dealer commission.
3. The **Land** tab holds sqft per Marla (272), the seller-payment approval limit (Rs 5,000,000), the province for transfer cost rates and the land accounts.

> Changing a rate applies to new documents only; posted invoices keep the values they were made with.

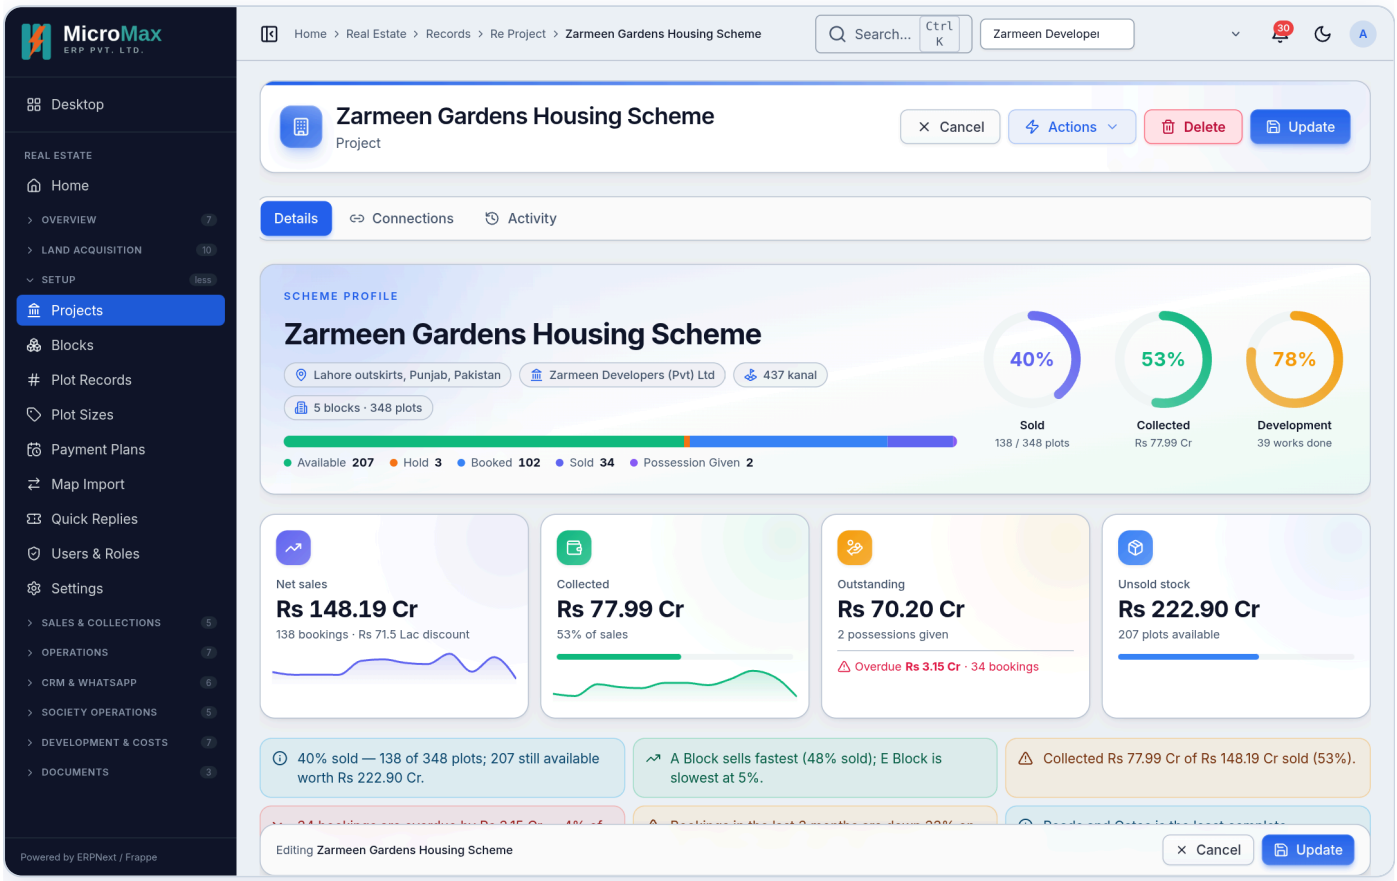

RE Settings — company, project and every rule.

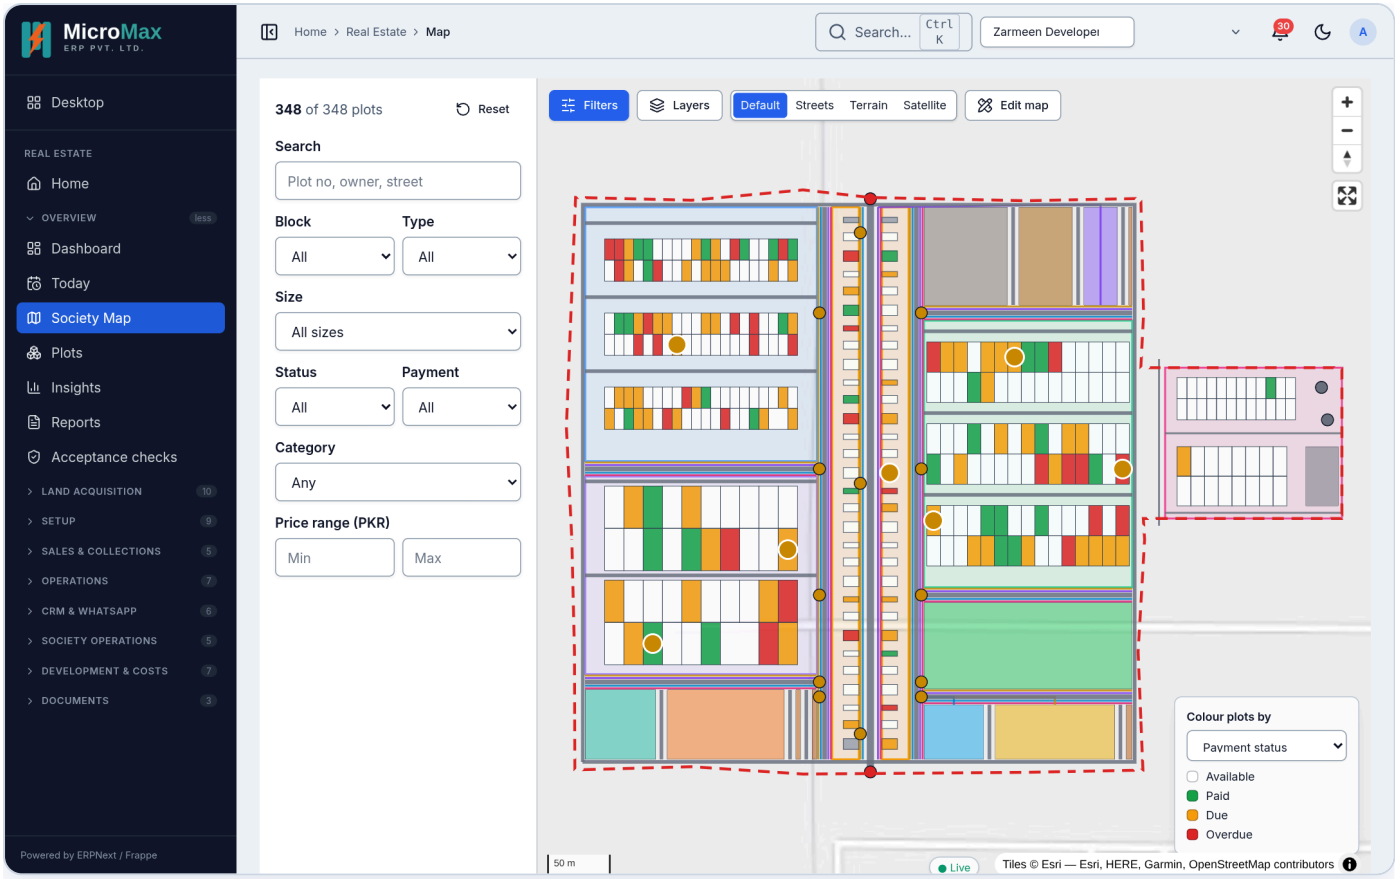

The Land tab: area units, approval limit and land accounts.

2 Project, boundary and land use

1. **Setup → Projects**: the scheme with its total land and boundary — drawn on the map or imported (KML / GeoJSON) in **Map Import**.
2. Land use (blocks, roads, public buildings, infrastructure, waste) must total **100%** of the boundary; the acceptance checks warn if it does not.
3. The boundary is the acquired land: once khasras are acquired, **Merge into boundary** (Land Overview, Admin) makes them the project map.

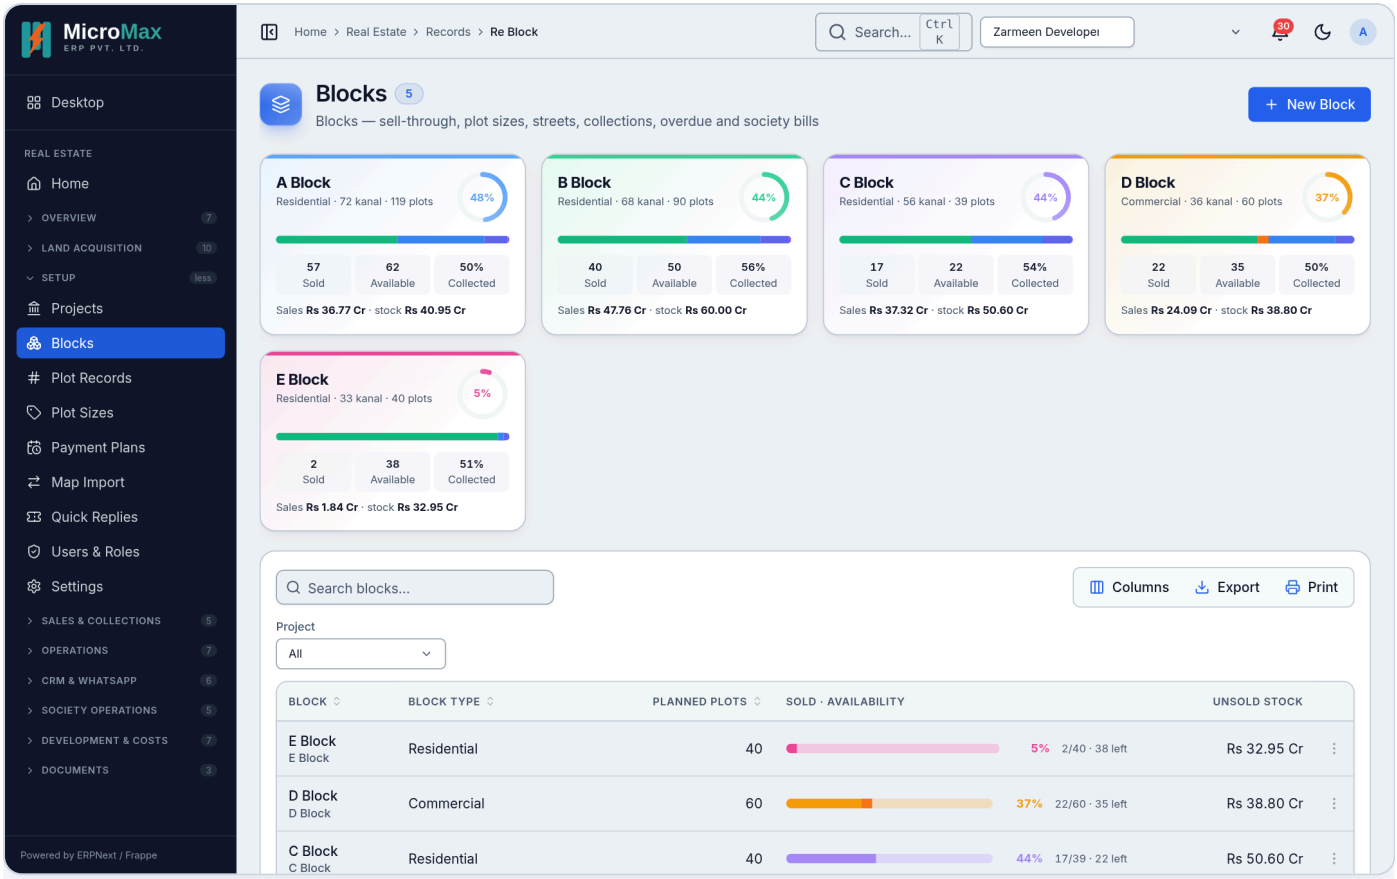

The project profile — land use, sell-through, collections and progress.

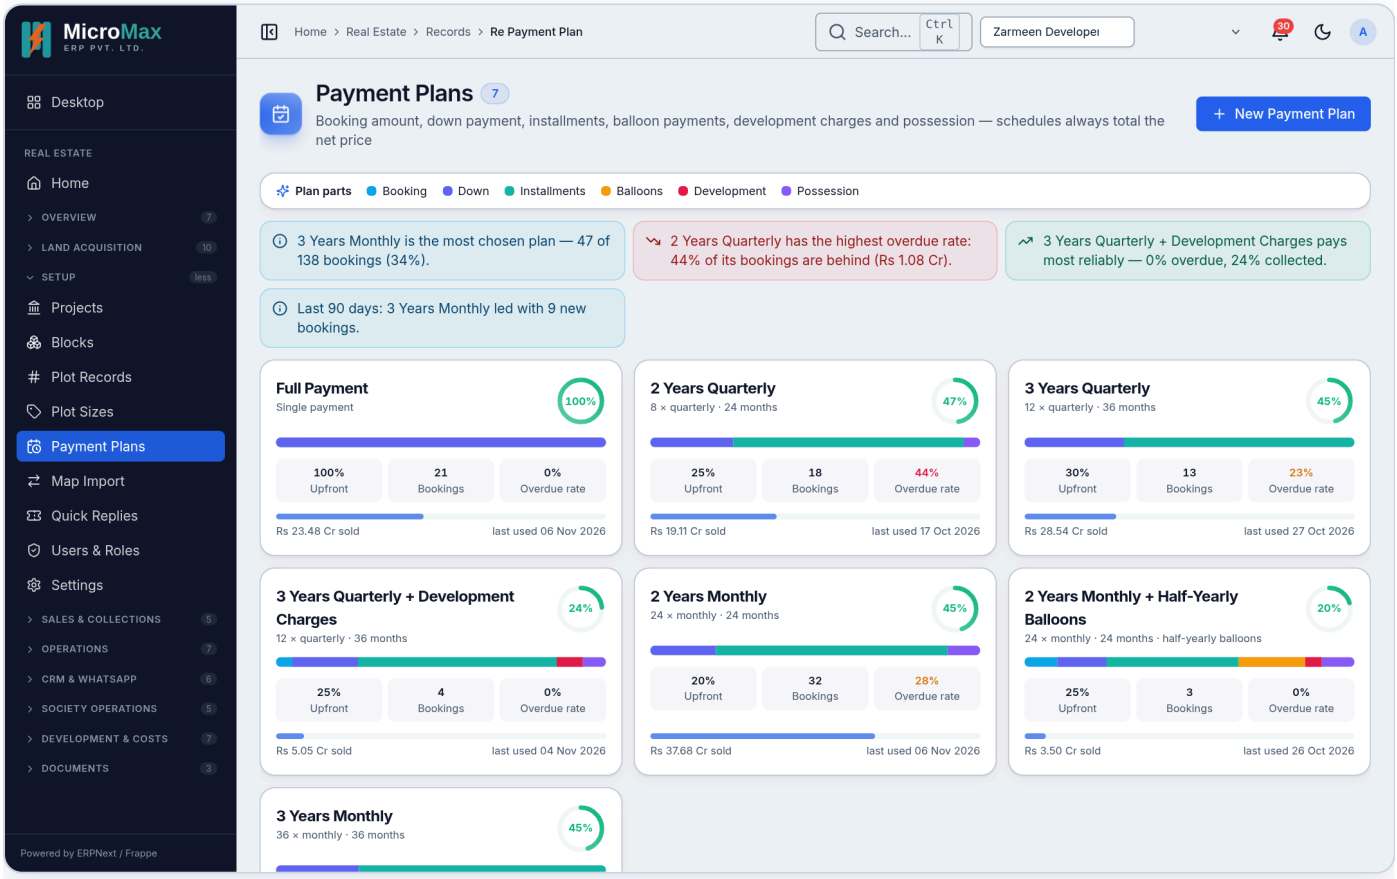

The society map with all layers; the land acquisition layer is switched on in the layer list.

3 Blocks, plot sizes, plots and payment plans

1. **Blocks** carry their outline, plot size and planned plots. **Plot sizes** carry the base price and monthly maintenance.
2. **Plot records**: number, block, size, street, corner / park-facing / boulevard flags, outline and price history.
3. **Payment plans**: booking %, down payment, monthly or quarterly installments, balloons, development charges and possession share — the schedule always totals the net price.

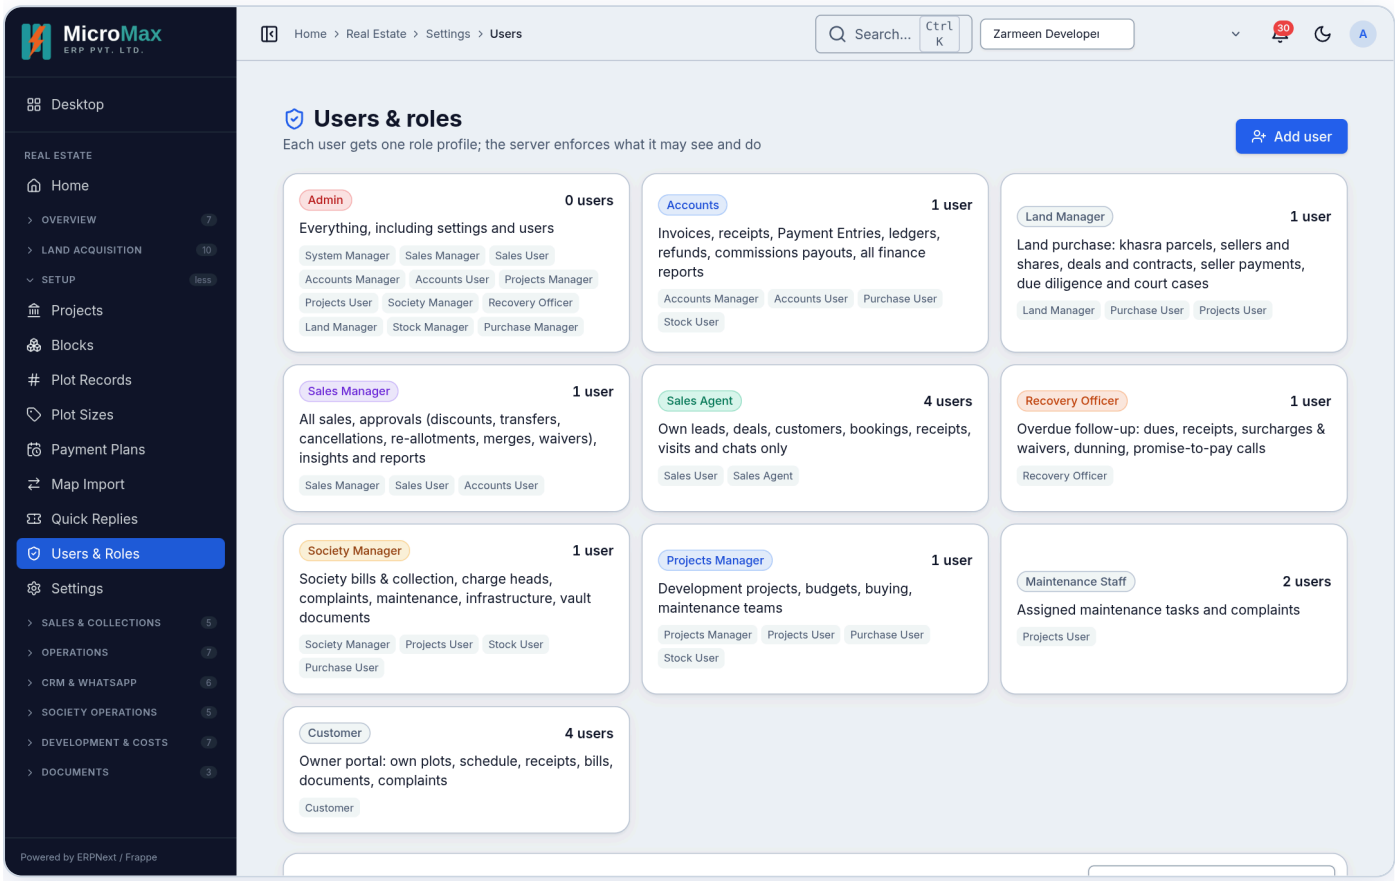

Blocks with sell-through and stock.

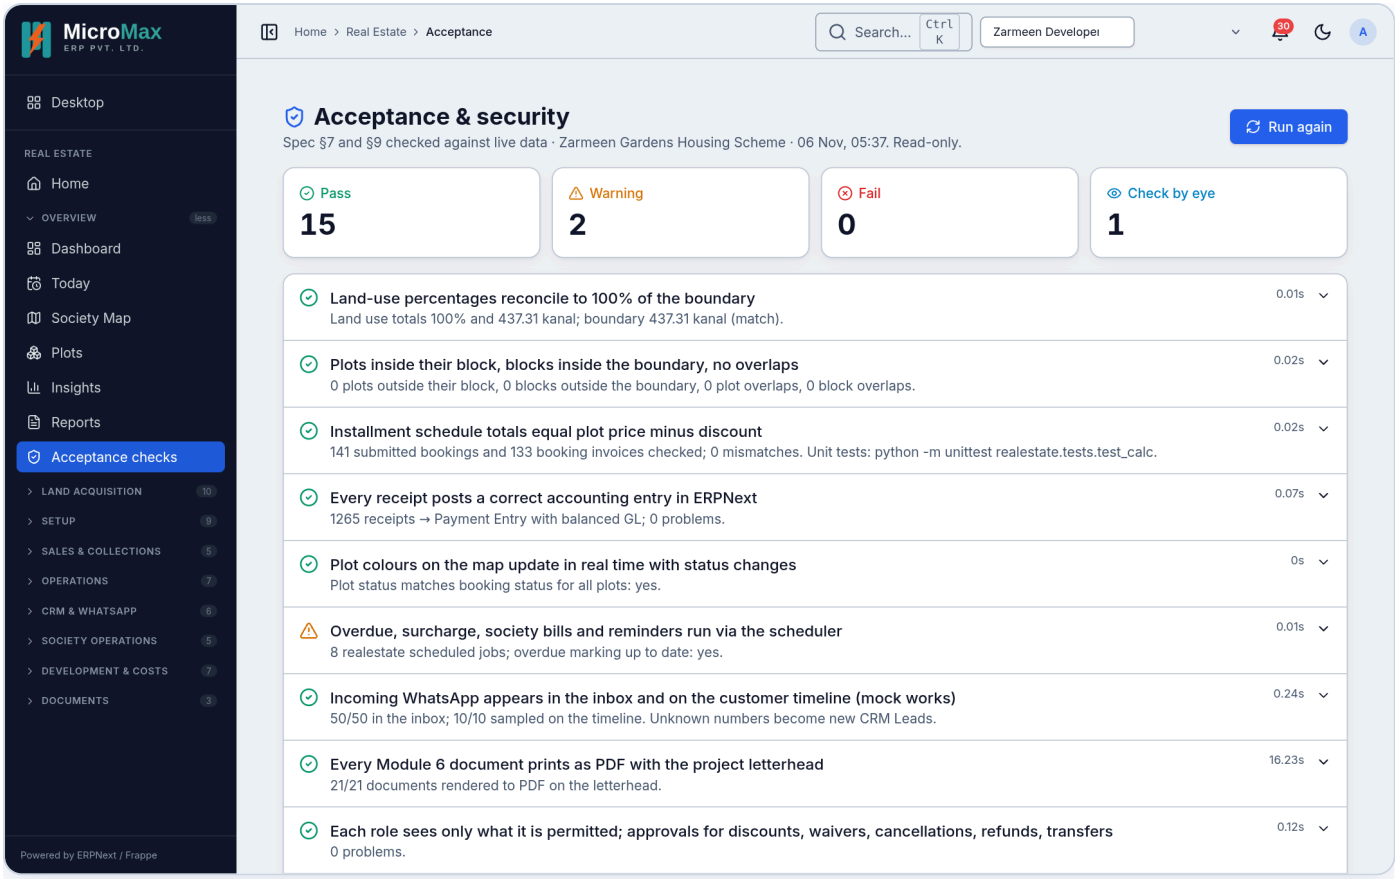

Payment plans and how many bookings use each.

4 Users, roles and go-live

1. **Setup → Users & Roles**: give each person one profile — Admin, Accounts, Land Manager, Sales Manager, Sales Agent, Recovery Officer, Society Manager, Projects, Maintenance or Customer.
2. Agents see only their own leads, customers and bookings — enforced on the server, not just the screens.
3. **Acceptance checks** (Admin) run every check from the specification: land use, layout, schedules, ledger, documents, roles and the land module.

Users & Roles — profiles and who has them.

Acceptance checks with evidence for each result.
